

# **Lumsden Public Works**

5/11/10

## **Equipment:**

- Unit #90 crawler loader – Kramer came to locate and provide an estimate on repairing a oil leak, since then the mobile service manager has been away and no one can find any info on our machine. We have decided to run #90 until the landfill is cleaned up.

## **Landfill:**

- Cory and the summer student have been picking litter and should finish Wednesday.
- We are going to begin the clean up of house hold garbage this week.

## **Drainage:**

- Ditch clearing damage has repaired.(we still have to replace a shrub at Kehlers)
- Fawn Ridge drainage plan has been looked at by A.E. and would recommend that option 1 be used.

## **Roads:**

- Dust Control- I am looking at using a new product called DeDust. This product is environmentally friendly and we would apply our self as it is needed.

## **Dikes:**

- On Wednesday afternoon I have our annual dike inspection with Sask. Watershed Authority.

## May 11, 2010 Utilities Report

### Reports:

- Dew Drop Inn; roof replacement cost, there were 3 quotes submitted. Accent roofing was asked to quote, but did not respond.

### Work in progress:

- Sewer line maintenance was completed last week
- Lagoon pumping is ongoing
- The lift station flow meter was installed and is working fine.

### Projects for 2010:

- Emergency Pump install will start May 20, 2010
