

******PUBLIC NOTICE******

Please be advised that a three dimensional (3D) seismic exploration program is planned north of Regina in the Rural Municipalities of Edenwold and Lumsden (see map below).

This regional seismic program is being conducted on behalf of Vale Potash Canada Limited by RPS Boyd PetroSearch in order to assess potential potash mineralization.

The seismic process involves sending vibrations into the earth and measuring the returning waves. The energy source will be setback from all structures in accordance with Saskatchewan Seismic Exploration Regulations.

Please note that unless you are contacted, your lands are not being entered. No private property will be accessed without prior consent.

Exploration Company: *RPS Boyd PetroSearch*
Expected commencement of Field Operations: November 1, 2011
Expected completion of Recording Operations: December 31, 2011
Program Name: 2011 Hovrah 3D

Should you have any questions,
